Grades (Secchi Depth):

A = > 9.8 ft.

B = 7.2 - 9.8 ft.

C = 3.9 - 7.2 ft.

D = 2.3 - 3.9 ft.

F = < 2.3 ft.

The numerical score for each water quality parameter are averaged to compute a lake grade on a scale from A to F.

A = Lakes with an A grade are generally healthy and characterized by beautiful clear water. These lakes are well-suited for recreational activities of all kinds throughout the summer.

B = Lakes with a B grade are also good for swimming and recreation, but late summer algae blooms may cut the season short.

C = The C grade signifies that a lake is typical of lakes in the seven-county metropolitan area. C lakes may not be ideal for swimming, boating, and fishing due to summer algae growth.

D/F = When a lake gets a D or F, it has limited water transparency, severe algae problems and very limited recreational use.

Impaired Water Standard is less than 1.0 meter for shallow lakes and 1.4 meters for all others

- Duck, Idlewild, Mitchell, Red Rock and Staring would be considered shallow lakes

A Level 1 Recreational Use Goal (for example Bryant and Riley Lakes) is typically 2.2 meters for secchi disc
